PROJECTS

AI Interview Simulator – Intelligent Mock Interview Platform

[GitHub](#)

- Developed a full-stack AI-powered mock interview platform using Spring Boot and React (Vite), enabling role-based interview session initiation and response handling.
- Implemented secure JWT authentication with role-based access control (USER/ADMIN) and BCrypt password hashing for stateless session management.
- Designed and built RESTful APIs to manage interview lifecycle operations, user workflows, and protected admin functionalities.
- Integrated Cohere AI APIs to dynamically generate interview questions based on selected job role and experience level.
- Structured MySQL database using JPA/Hibernate and configured Axios interceptors for secure frontend-backend communication and automated token handling.

SmartMail AI – AI-Powered Email Reply Assistant

[GitHub](#)

- Built a full-stack AI-powered email reply assistant using Spring Boot and React that generates tone-based email responses.
- Integrated Cohere LLM API using WebClient and implemented prompt engineering for context-aware and structured email generation.
- Designed RESTful APIs using layered architecture (Controller-Service-DTO) and handled JSON parsing, error handling, and CORS configuration.
- Developed a Chrome Extension (Manifest V3) that injects an AI reply generator into Gmail using DOM manipulation and MutationObserver.
- Deployed the backend on Render and secured API keys using environment variables, enabling end-to-end integration between Gmail, backend, and AI API.

ACTIVITIES
